STRAIGHT TALK ABOUT CROOKED TEETH

Find Out How A Great Smile Can Actually Change Your Life!

Wilfred A. Miyasaki DMD  |  David K. Miyasaki DMD
Quality of your smile effects your relationships!
Do you cover your smile with your hand in photographs?
You can’t hide ugly, chipped, stained and crooked teeth...
½ of all people surveyed say they’d love a better more attractive smile
“Grammy, why are all your teeth yucky and brown?”

Having a great smile has many hidden benefits:
“The facial muscles involved in smiling are hard wired to receptors in the human brain. Therefore every time you smile your brain release chemicals responsible for putting you in a better mood.
Therefore... it is literally impossible to smile without simultaneously elevating your mood!”
Plus it makes other people feel better when you smile!
It makes them more attracted to you
More disposed to like you
More eager to business with you
More helpful if you need a favor from them
So if a smile is so important, why don’t people smile more?
Because most people are ashamed of their smile!

Our Goal: to get you the best possible smile as conservatively as possible
The best way? Be born with perfect teeth. “Ok, that takes care of 1% of the people on earth”
Now here’s the truth: Do you know why a lot of people don’t get their smiles fixed up? “It’s because of low self esteem! For some reason they feel like they don’t deserve to look as good as they can... but a great smile will do wonders to elevate your self-esteem.

Another reason? It will take too long. Maybe that used to be true. But not anymore. Maybe you’re one of those people who is afraid of pain. This is a big one. Most people don’t even like to hear “this will only hurt a little” But now that has changed! It’s more comfortable.

Expense... Dentistry is not cheap. However, if you get the right dentist you do not have to spend a ton of money to get your million dollar smile.
The real truth is… it’s more expensive NOT to have a wonderful smile than to go through the expense to get one. You can’t put an exact financial value on having a great smile… but I bet it’s at least 100 times more that the cost.

In business looks DO count. How you feel about yourself does count. If you don’t smile because you are ashamed of your teeth, I believe the overall financial cost to you will be considerable.

A beautiful smile is a definite turn on when being around people.

There is another important reason to straighten your teeth
How To Reduce Your Risk Of Malocclusion And Periodontal Disease

Why are crooked teeth a problem?
Teeth that are not aligned properly in your mouth create what dentists call “malocclusion.” left untreated, malocclusion can lead to periodontal disease and create abnormal amounts of stress on teeth and jaws which leads to premature wear.

What type of malocclusion do you have? Here are some potential issues...
Malocclusion & Premature Wear

Poorly aligned teeth can create abnormal lateral force and stress on surrounding periodontal structures – *can lead to...*

- Worn down shortened teeth
- Poor root support, tooth mobility and eventually tooth loss
- Chipping, Abfraction
- Premature wear
- Abnormal Lateral Force
- Contact Point

So, what can be done to get straighter teeth?
The old braces are usually square in shape and typically move the crown of the tooth in the first year and the root of the tooth towards its final position in the second year, thus requiring about two years of treatment.

Fastbraces® Technology gently allows for movement of the roots of the teeth towards their final position from the onset of treatment, thus treatment can be completed in just a matter of weeks for some patients!
Could Comprehensive Ortho be done in just about 20 weeks with just one-wire?

- ✔ Non-Extraction
- ✔ Root Parallelism
- ✔ For Children & Adults

Fastbraces® upright the root of the tooth from the beginning of treatment

Fastbraces® Technology typically works with just one orthodontic wire from start to finish, whereas old braces usually require a series of wires and tightening procedures. Fastbraces® Technology uses a special square super-elastic nickel-titanium wire which is activated by the special design of the braces. This dynamic wire helps upright the whole tooth using the natural temperature of the mouth in just one stage.
Can fast, comprehensive orthodontic treatment now be done in about 20 weeks?...

Fastbraces® Technology is fast, safe, easy and affordable treatment revolutionizing the field of orthodontics! It allows for movement of the roots of the teeth towards their final positions from the beginning of treatment by torqueing them from the very first appointment. Patients can now get results often with less sensitivity in just a few weeks. It has been develop and tested over the past 25 years and is now becoming available in countries around the world.
FastBraces

- Requires less time
- Saving are passed on to you
- Very few offices provide this service
- Requires a specialized exam and consultation to see if you are a candidate

Your smile is one of the first things people notice about you. Don’t let an unattractive one sabotage your dreams for another minute! Start enjoying a brighter future, increased confidence, enhanced career success, romance, and a more attractive look.

Only 4 FREE Smile Consultations Are Available This Month

Here’s what to do: Simply call 797-3652 and schedule your initial consultation for a FREE Smile Makeover evaluation.
